

Zsh - your future default shell (Handouts)

Bernhard Tittelbach

28. April 2012

die Zsh

- Unix Shell
- 1990 von Paul Falstad, Princeton University
- wird aktiv weiterentwickelt
- aktuelles Release 4.3.17 von 2012-02-23
- Hilfreiche Community
 - [#zsh@irc.freenode.net](#)
 - <http://www.zsh.org/mla>
- Umfangreiche (!) Feature-Liste
 - 17 man-pages
 - + fast Superset der Features von bash, ksh, csh

Von Bash zu Zsh ohne Einarbeitungszeit

- zsh in default-config der bash sehr ähnlich
- bash mit zsh ersetzen Alleine bringt schon Vorteile

Features

- Tippfehlerkorrektur
- gemeinsame History über mehrere laufende Shells hinweg
- vcs_info prompt
- ZLE statt readline
 - Menü-Auswahl
 - multi-line command prompt editing
- wesentlich mächtigere Tab-Vervollständigung

Von Bash zu Zsh ohne Einarbeitungszeit

- zsh in default-config der bash sehr ähnlich
- bash mit zsh ersetzen Alleine bringt schon Vorteile

Features

- Verzeichnis-Vervollständigung
`/u/in/X` → `/usr/include/X11/`
- Variablen-expansion `$TERM<tab>`
- floating point math `echo $((2.2+3.3**2))`
- korrekte Behandlung von Quoting:
 - `[[-n $var]]`
 - `echo "abc $(echo "d e f") def"`

Weitere Features

- `[[-n $var || $var == *abc* || $var =~ ^var$]]`
- Assoziative Arrays
- Dateimanager mit ZLE Menu
- ZLE Undo
- function hooks
- shorthands `for a (array)`
- global aliases, suffix aliases (z.B.: für `>/dev/null`)
- `cmd &!`
- Umfangreiche Konfigurierbarkeit
 - `man zshoptions`
 - `zstyle`

Redirection in zsh

- Alles was in bash geht, geht auch in zsh
- Stdout und Stderr in Prozess pipen
`helloouterr |& less`
- Prozess-Output als Fifo oder Temp-File verwenden
`less <(sort -n tosort)`
`less =(sort -n tosort)`
- Dateinhalt in die CL
`echo $(< file)`
- CL Zeichenfolge in Temp-Datei
`cat =(<<< "text der in ein tmp file kommt")`
- Multi-Target Redirect !
`echo HalloHallo > file1 > file2`
- File durch Prozess pipen und überschreiben
`sort -n =(<sortme) >! sortme`
- Shell-Optionen: `noclobber` und `histallowclobber`

Globbing

=<cmd>	expand executable cmd to full path
<m-n>	number between m and n.
~B	files not matching B
A~B~C	files matching A but not B and not C
(#i)	case insensitive. OFF: (#I)
(#l)	lower case match upper case but not vv
(#b)	backreferences into \$match
(#a<n>)	approximate match, <n> errors allowed
(#s)	equals ^ in RE
(#e)	equals \\$ in RE

Extended Globbing Flags

Syntax: `ls *(qualifiers[^not-qualifiers])`

/	directories
F	filled directories
.	plain files
@	symbolic links
=	sockets
p	named pipes (FIFOs)
*	executable plain files (0100)
%	device files (character or block special)
%b	block special files
%c	character special files
r	owner-readable files (0400)
w	owner-writable files (0200)
x	owner-executable files (0100)
A	group-readable files (0040)
..	
s	setuid files (04000)

Extended Globbing Flags

Syntax: `ls *(qualifiers[^not-qualifiers])`

<code>[m]</code>	only return m'th result (can be negative)
<code>[m,n]</code>	only return results m to n
<code>u<u></code>	owned by user (<u> is UID or :username:)
<code>g<g></code>	owned by group (<g> is GID or :groupname:)
<code>D</code>	include . files in *
<code>N</code>	NULL_GLOB: empty string if no match
<code>d<d></code>	files on device <d>
<code>L<n></code>	files of size <n> Byte (use Lk,Lm,Lg for KiB,MiB,GiB)
<code>m<n></code>	files modified <n> days ago (use mM,mh,mm for Months,Hours,Minutes)
<code>c<n></code>	metadata changes <n> days ago (prepend <n> with +/- for at-least/at-most)
<code>o/O_</code>	sort in asc/desc order by qualifier _
<code>n</code>	by names
<code>L</code>	by filesize
<code>m/a/c</code>	by file m/a/c-time

Globbing Modifiers

Syntax: `print *(<qualifiers>:<modifier1>:<modifier2>)`

a	turn filename into absolute path
A	like a but resolve symbolic links too
t	only show basename (tail of filepath)
h	only show head of filepath
e	only show extension of filename
r	remove extension, only show root of filename
q	quote
x	quote, but separate on whitespace
Q	remove one level of quotes
l	convert to lowercase
u	convert to uppercase
s/l/r	substitute l with r once. global: gs/l/r

modifier modifiers ... see man-page

Hilfe ? Inline-Hilfe !

- <Tab> hilft fast immer (sonst <Tab><Tab>)
- <Strg>Xd Vorschau für Globbingausdruck unter Cursor
- <Alt>H man-page für Cmd unter Cursor
- <Strg>Xz Blättert durch Keybinding Hilfe
- <Strg>Xg Blättert durch Globbing Hilfe
- <Strg>Xb Zeigt Hilfe für ,. Abkürzungen

(für grml config)

UseCases

- compile a quick c prog writing to stdout and stderr
- demonstrate multi-line editing and redirection

```
gcc -o helloouterr -x c =(<<<'\#include <stdio.h>
int main()
{
    fprintf(stdout,"Hallo StdIn\n");
    fprintf(stderr,"Hallo StdOut\n");
}' )
```

UseCases

- cd to dir that contains file *besserverstecker*

```
cd **/*(\#i ) Besserverstecker *[1]:h)
```

UseCases

- remove dangling symlinks

```
rm **/*(-@)
```

UseCases

- list all symbolic links that point to ...

```
la *(@e %'[[ ${REPLY:A} == *dira* ]]'%)
la *(@e %'[[ ${REPLY:A} == /tmp* ]]'%)
la *(@e %'[[ ${REPLY:A} == ~ ]]'%)
la *(@e %'[[ ${REPLY:A} == /boot ]]'%)
la *(@e %'[[ ${REPLY:A} == $PWD ]]'%)
```

UseCases

- rmdir all empty directories in all subdirectories

```
rmdir **/*(/^F)
```

UseCases

- cp new files/photos of last 10 days
- create dir newotos on the fly

```
cp /media/CAM/**/*(.c-10) newotos/<Ctrl+Xp>
```

UseCases

- only rm *.txt files that contain „DELETE ME“

```
echo "IMPORTANT" > {a-f}.txt
echo "DELETE ME" > {g-l}.txt
mkdir z.txt

contains() { grep -q "$*" $REPLY }
rm *.txt(.e:'contains DELETE ME':)
```

Grml oder Xro Features

- any
- lsdisk
- purge
- se, simpleextract
- ati, acs
- cdt
- rmmdir

- qcp, qmv
- iptables-show
- sum_filesizes
- waitpid

Empfohlene Zsh Configs

- Grml-Config
 - <http://grml.org/zsh/>
 - apt-get repository deb <http://deb.grml.org> grml-stable
apt-get install grml-etc-core
- Meine Config
 - <https://www.tittelbach.at/zsh/>

```
wget --no-check-certificate \
  https://www.tittelbach.at/zsh/.zshrc{,.pre,.local}
zsh
UpdateMyZshrc
```
